EDUCATION

University of Washington Sep 2026 – Jun 2028 (expected)
M.S. Technology Innovation · Global Innovation Exchange (GIX)

Tsinghua University Sep 2025 – Jun 2028 (expected)
GIX dual-degree program · PI Lab, Department of Computer Science and Technology

Shanghai Jiao Tong University Jun 2021 – Jun 2025
B.Eng. Industrial Design · Rank 1/30 · National Scholarship · UCL exchange

INTERNSHIP EXPERIENCE

ByteDance | Seed Feb – Jun 2026
LLM Data Product Intern | DataSeek AI Evaluation Analysis

- Led product definition and iterative releases of DataSeek's AI evaluation-analysis module, turning benchmark failures into capability diagnoses and training-data priorities. Built a **Python/LangGraph** prototype and designed **four analysis modes** around reference-answer and scoring-rubric availability.
- Authored **30+** structured prompts. Led capability bucketing, deduplication, and separate primary-cause and involved-question counts, from problem discovery and prototyping through engineering acceptance.
- Translated findings from **700+** cumulative report reviews into nearly 100 prioritized **P0/P1/P2** issues, requirements, and acceptance criteria; paired display fallbacks with longer-term prompt and analysis changes.

Sohu | Mint Lab Oct 2025 – Jan 2026
AI Product Management Intern

- Designed an AI authoring workflow that turns fragmented ideas into editable topic graphs, outlines, and drafts; led prompt design and an Outline-to-Draft flow with user control over structure before generation.
- Built a **six-dimension** quality rubric and Python end-to-end regression scripts; compared model and prompt choices under quality, latency, and API-cost constraints.

Weimian Technology | FacePhys Aug – Oct 2025
Product Management Intern

- Reviewed 50+ studies and solutions and interviewed six users for camera-based physiological monitoring. Wrote the app PRD and supported UI/iOS testing; used retention and willingness-to-pay findings to inform a shift from consumer subscriptions toward B2B2C scenarios.

Tsinghua University | Future Laboratory Jun – Sep 2024
Human-Computer Interaction Research Intern

- Built three **C#/Unity** interactions for a wearable force-feedback prototype; evaluated interaction timing and feedback with **eight participants** to guide design iterations.

SELECTED PROJECTS

StructGraph | Structured Generation & Evaluation Spring 2026
Python · **asyncio** · LLM evaluation | Statistical Machine Learning course

- Built a resumable experiment runner comparing two generation methods across **30 topics** and **three runs** per condition **(180 outputs),** using **six-dimension** scoring and paired-topic analysis.
- Identified a quality tradeoff under an LLM judge: novelty rose from **3.23 to 3.87/5** while readability fell from **4.99 to 4.52/5,** informing the next iteration of generation constraints.

Real-Time Sleep Research Platform 2026
Python · **FastAPI** · Vue · **WebSocket** · BLE

- Built a research app linking sensor setup, experiment controls, and session review; exposed disconnected devices, stale readings, and intervention states through live snapshots and timestamped event logs.

SKILLS

Product: PRDs, AI workflow design, prompt design, evaluation, issue prioritization, Figma
Technical: Python, **LangGraph, FastAPI,** Vue, JavaScript, C#, Git; AI-assisted prototyping
